## Supervise Asbestos Removal

### Supervise asbestos removal on site.

Learn how to instruct and monitor workers on a site to ensure that they are correctly handling, removing and disposing any asbestos-containing materials in a safe way. Asbestos was used most during the mid to late 1970s, but asbestos cement products like asbestos flues and water pipes were still being installed in the 1990s. Asbestos use in brake linings, pads and clutch plates has only recently been phased out.

This qualification is suitable for site supervisors, site foremen and asbestos removalists seeking further licencing.
